

Effective as of 1 October 2025

## Price list for electricity network services for 110 kV

110 kV power distribution	VAT 0%	VAT 25.5% *
Basic charge, €/month	950.00	1 192.25
Power charge €/MW, month	1009.80	1 267.30
Reactive power charge		
Input charge €/MVar, month	666.00	835.83
Output charge €/MVar, month	666.00	835.83
Reactive energy charge €/MVarh	5.00	6.28
Distribution		
Winter day €/MWh	12.93	16.23
Other times €/MWh	4.39	5.51

\* Distribution prices subject to VAT are rounded to two decimals.

Electricity tax	VAT 0%	VAT 25.5%
Tax class I €/MWh	22.53	28.27515
Tax class II €/MWh	0.63	0.79065

### 110 kV power distribution

110 kV power distribution is available at the 110 kV voltage level. The power charge is in effect for all months of the year. The charged capacity is the highest hourly average capacity metered during the month. If the customer has two or more connections to the same substation, the charged capacity is determined by the sum capacity of the hourly meter readings for the connections. Reactive power charges are charged monthly for all months of the year. Invoicing for reactive electricity does not take into account the 50 highest instances of exceeding the free reactive electricity limit per month. Reactive energy is invoiced according to reactive power exceeding the invoicing basis, both for reactive electricity output and intake.

The input charge for reactive power is calculated on the basis of the month's highest reactive power input reading obtained by taking the metered hourly figure for reactive power input and subtracting 16% of the metered active power for the same hour. In addition, a customer-specific fixed minimum amount for free reactive electricity is established.

The output charge for reactive power is calculated on the basis of the month's highest reactive power output reading obtained by taking the metered hourly figure for reactive power output and subtracting 4% of the metered active power for the same hour. In addition, a customer-specific fixed minimum amount for free reactive electricity is established.

The distribution charge for a winter day is in effect from Monday to Friday, 7:00–21:00, between 1 December and 28 February, and in leap years until 29 February. At other times, the distribution charge for other times is in effect.

### Electricity tax

Electricity tax is charged for all electrical energy distributed to customers through the distribution network. The electricity tax charge includes the excise tax on electricity and the strategic stockpile fee. Electricity consumption sites used for production purposes, data centre services or professional greenhouse cultivation may register for electricity tax class II. Application forms can be ordered from Customer Service. More information on electricity tax is available from Finnish Customs, Southern Customs District/excise duties.
